### Company Profile

Shepherd AI, LLC, dba SAIFE, is driving technology innovations with smart devices that detect inappropriate human touch in sensitive environments. The company's marquee product currently helps the massage industry mitigate human behavior liability and has future implications for other industries including nursing homes, childcare centers, hospitals, and public spaces.

SAIFE Technology monitors massage activity and alerts management the moment an off-limits body part is engaged. The device does this without recording audio or video. SAIFE Technology serves as a powerful deterrent for potential predators as it not only reports details of inappropriate behavior in real time, but also tracks warning signs to prevent incidents before they occur.
